Continued COVID-19 Disease Activity

Trinity County- TRINITY COUNTY – On June 24, 2020 Trinity County Health and Human Services (HHS) Public Health Branch (PHB) received notification of a lab confirmed case of COVID-19 in a Humboldt County resident, who has been residing in Trinity County for the last two (2) weeks.

The Trinity County PHB (TCPHB) has been conducting contact tracing in coordination with the Humboldt County Case Investigator to identify those individuals and sectors in Trinity County that have been exposed. All known individual close contacts have been identified; however, it can be difficult to determine the extent of community exposure within sectors that were visited by the individual and the consistency of masking.

California has seen a record increase in new cases over the last 48 hours. CDPH has released the latest incidence rate that shows an increase of 69 percent of new cases statewide over the last 48 hours. The statewide masking mandate, released June 18, 2020, continues to be in effect and can be found [here](#).

We ask that our residents and any persons entering Trinity County comply with the statewide masking order. This will assist us all in preventing the spread to ensure that we are able to safely remain open and ensure economic viability.

It is the expectation of TCPHB, Trinity County Health Officer, and Environmental Health (EH) Director that businesses and other sectors in Trinity County follow the Governor's masking mandate. Businesses and other sectors will be routinely monitored to evaluate compliance with their business plans. Those who have not submitted a plan that includes the masking policy should do so immediately.

COVID-19 continues to be a threat for Trinity County residents; this virus has demonstrated that it is not going away and outdoor temperatures do not deter it from spreading.

The most effective means of preventing the spread of this virus is aggressive and broad masking policies. The Governor has made it clear that counties will be held to the attestations that they have made in order to keep sectors open and progress with reopening other sectors safely.

High-risk situations in which face covering must be worn:

- Inside of, or in line to enter, any indoor public space, unless exempted by state guidelines for specific public settings such as schools and childcare centers;
- Obtaining services from the healthcare sector in settings including, but not limited to, a hospital, pharmacy, medical clinic, laboratory, physician or dental office, veterinary clinic, or blood bank unless directed otherwise be an employee or healthcare provider;
- Waiting for or riding on public transportation or paratransit or while in a taxi, private car service, or ride-sharing vehicle;
- Engaged in work, whether at the workplace or performing work off-site, when:
 - Interacting in-person with any member of the public;
 - Working in any space visited by members of the public, regardless of whether anyone from the public is present at the time;
 - Working in any space where food is prepared or packaged for sale or distribution to others;
 - Working in or walking through common areas, such as hallways, stairways, elevators, and parking facilities;
 - In any room or enclosed area where other people (except for members of the person's own household or residence) are present when unable to physically distance.

- Driving or operating any public transportation or paratransit vehicle, taxi or private car service or ride-sharing vehicle when passengers are present. When no passengers are present, face coverings are strongly recommended.
- While outdoors in public spaces when maintaining a physical distance of 6 feet from persons who are not members of the same household or residence is not feasible.

The following individuals are exempt from wearing a face covering:

- Persons age two years or under. These very young children must not wear a face covering because of the risk of suffocation.
- Persons with a medical condition, mental health condition, or disability that prevents wearing a face covering. This includes persons with a medical condition for whom wearing a face covering could obstruct breathing or who are unconscious, incapacitated, or otherwise unable to remove a face covering without assistance.
- Persons who are hearing impaired, or communicating with a person who is hearing impaired, where the ability to see the mouth is essential for communication.
- Persons for whom wearing a face covering would create a risk to the person related to their work, as determined by local, state, or federal regulators or workplace safety guidelines.
- Persons who are obtaining a service involving the nose or face for which temporary removal of the face covering is necessary to perform the service.
- Persons who are seated at a restaurant or other establishment that offers food or beverage service, while they are eating or drinking, provided that they are able to maintain a distance of at least six feet away from persons who are not members of the same household or residence.
- Persons who are engaged in outdoor work or recreation such as swimming, walking, hiking, bicycling, or running, when alone or with household members, and when they are able to maintain a distance of at least six feet from others.

Persons exempted from wearing a face covering due to a medical condition who are employed in a job involving regular contact with others should wear a non-restrictive alternative, such as a face shield with a drape on the bottom edge, as long as their condition permits it.

What is a cloth face covering?

A cloth face covering is a material that covers the nose and mouth. It can be secured to the head with ties or straps or simply wrapped around the lower face. It can be made of a variety of materials, such as cotton, silk, or linen. A cloth face covering may be factory-made or sewn by hand or can be improvised from household items such as scarfs, T-shirts, sweatshirts, or towels.

How well do cloth face coverings work to prevent spread of COVID-19?

There is scientific evidence to suggest that use of cloth face coverings by the public during a pandemic could help reduce disease transmission. Their primary role is to reduce the release of infectious particles into the air when someone speaks, coughs, or sneezes, including someone who has COVID-19 but feels well. Cloth face coverings are not a substitute for physical distancing, washing hands, and staying home when ill, but they may be helpful when combined with these primary interventions.

How should I care for a cloth face covering?

It's a good idea to wash your cloth face covering frequently, ideally after each use, or at least daily. Have a bag or bin to keep cloth face coverings in until they can be laundered with detergent and hot water and dried on a hot cycle. If you must re-wear your cloth face covering before washing, wash your hands immediately after putting it back on and avoid touching your face. Discard cloth face coverings that:

- No longer cover the nose and mouth
- Have stretched out or damaged ties or straps
- Cannot stay on the face
- Have holes or tears in the fabric
